

Abdullah Abdul Qudoos

Mobile & Full-Stack Developer · Gujranwala, Pakistan

abdullahabdulqudoos.vercel.app · github.com/Abdullahkk659 · abdullahqudoos10@gmail.com · [Linkedin](#)

SUMMARY

Full-stack developer building and deploying web and mobile applications with React, React Native, Node.js and Firebase. Comfortable across the stack from interface to database, including REST API design, authentication and real-time data. Also works in machine learning — data cleaning, exploratory analysis, and implementing and benchmarking classification algorithms. Currently completing a BS in Computer Science.

TECHNICAL SKILLS

Frontend React.js, React Native, JavaScript (ES6+), HTML5, CSS3, Tailwind, Vite, responsive design

Backend Node.js, Express, PHP, REST APIs, Firebase (Auth, Firestore, Storage, Cloud Messaging)

Databases PostgreSQL, MongoDB, Firebase Firestore, SQL

Machine learning Python, NumPy, Pandas, Scikit-learn, XGBoost — EDA, data cleaning, classification, model evaluation and benchmarking

Languages & tools JavaScript, Python, Java, SQL, Git, GitHub, Vercel, Cloudinary, Jupyter/Colab

EXPERIENCE

Mobile & Web Developer — Freelance | Gujranwala, Pakistan · 2026

- Built and deployed full-stack web and mobile applications for clients using React, React Native, Node.js and Firebase
- Handled projects end to end: interface, REST API, database schema, authentication and deployment

PROJECTS

AI Business Plan Generator | React, Vite, Express, Anthropic API, Firebase

ai-business-plan-generator-six.vercel.app

- Multi-step wizard that collects business inputs and generates a nine-section plan, computed financial projections and a PDF export
- Routed model calls through an Express proxy, keeping the API key in a server environment variable rather than the browser bundle
- Public demo serves pre-generated plans, so the live site makes no API calls — no key exposure, no running cost
- Firebase Auth (email/password and Google) with per-user plan storage in Firestore

InsightHire — Career Recommendation App | React Native, Node.js, Firebase

github.com/Abdullahkk659/InsightHire

- React Native app that recommends suitable job departments from a Big Five personality assessment
- Scoring runs server-side in a Node.js REST API rather than in the client, returning ranked recommendations
- Firebase Auth with per-user storage of assessment results

Heart Disease Classification Benchmark | Python, NumPy, Pandas

github.com/Abdullahkk659/heart-disease-prediction-

- Implemented K-Nearest Neighbours, Logistic Regression and Gaussian Naive Bayes from scratch in NumPy, including gradient descent on binary cross-entropy
- Leakage-free pipeline on the UCI Cleveland dataset — Min-Max scaling fitted on training data only, stratified 242/61 split
- Tuned hyperparameters with 5-fold stratified cross-validation; evaluated once on the held-out test set
- Naive Bayes performed best at 81.97% accuracy (precision 0.867, F1 0.825); all three models tied on recall, differing only in false positives

Android Malware Traffic Classifier | Python, XGBoost, Scikit-learn

github.com/Abdullahkk659/Android-Malware-Detection

- Four-class classification of Android network traffic — benign, adware, scareware and SMS malware — from ~80 flow features (CICAndMal2017)
- Replaced the original Keras dense network (256→128→64, 100 epochs) with XGBoost — better suited to tabular data, far faster on CPU
- Rebalanced the classes so reported accuracy reflects real performance rather than majority-class bias
- Gradient-boosted trees expose feature importances, so a detection can be explained by the features that drove it

EDUCATION

BS Computer Science — GIFT University | Gujranwala, Pakistan · Oct 2023 – Present

Relevant coursework: Data Structures & Algorithms, Object Oriented Programming, Database Management Systems, Operating Systems, Software Engineering, Artificial Intelligence, Information Security, Computer Architecture, Automata Theory, Mobile Application Development.

CERTIFICATIONS

- **Harvard HSIL Hackathon** — participation, two-day event with Harvard T.H. Chan Health Systems Innovation Lab, GIFT University and Brackets (April 2026)
- **Code & Create Project Display 2026** — participation, Mobile App Development category, GIFT University SEAS & YCPS (February 2026)
