

Abdullah Abdul Qudoos

Date of birth: 21/08/2004 | **Nationality:** Pakistani | **Gender:** Male |

Address: Pakistan (Home)

● EDUCATION AND TRAINING

28/10/2023 – CURRENT Gujranwala, Pakistan

BACHELORS IN COMPUTER SCIENCE Gift University

BS Computer Science 2026 – Present
Gift University — Gujranwala, Pakistan
EQF Level 6 (in progress)

Courses Covered

Programming Fundamentals, Object Oriented Programming,
Data Structures & Algorithms, Discrete Mathematics,
Database Management Systems, SQL Query Language,
Operating Systems, Computer Architecture,
Digital Logic Design, Automata Theory,
Software Engineering, Information Security,
Artificial Intelligence (Python), Probability & Statistics,
Assembly Language, Web Technologies,
Mobile Application Development (MERN Stack)

Practical Skills:

React.js, React Native, Node.js, HTML, CSS, JavaScript,
MongoDB, PostgreSQL, Firebase, SQL,
Full Stack Web Development, Mobile App Development

Level in EQF EQF level 6

● WORK EXPERIENCE

MOBILE APPLICATION DEVELOPER – FREELANCE – 10/02/2026 – 21/02/2026 – GUJRANWALA, PAKISTAN

Mobile Application Developer
Freelance

10/02/2026 – 21/02/2026 | Gujranwala, Pakistan

Main activities:

Frontend developer with hands-on experience building and deploying full-stack web and mobile applications using React, React Native, and Firebase. Also experienced in data analysis and machine learning, including data cleaning, EDA, model training, and benchmarking classification algorithms. Comfortable working across the full stack from UI to database to ML pipeline. Currently pursuing BS Computer Science.

Frontend: React.js, React Native, HTML5, CSS3, JavaScript (ES6+), Responsive Design

Backend: Node.js, PHP, Firebase (Auth, Firestore, Storage, FCM), REST APIs

Databases: Firebase Firestore, MongoDB, PostgreSQL, SQL

Machine Learning: Python, Scikit-learn, Pandas, NumPy — EDA, Data Cleaning, KNN, Naive Bayes, Logistic Regression, Model Benchmarking

Tools: Git, GitHub, VS Code, Vite, Cloudinary, Jupyter/Colab

Concepts: Real-time Databases, Cloud Storage, Authentication, CRUD Operations, Push Notifications, Classification, Model Evaluation & Accuracy Benchmarking

Projects:

Nova — Full Stack Social Media Platform Prototype

Live: novagram.vercel.app

GitHub: github.com/Abdullahkk659/Nova-App

- Built Instagram-style app with real-time feed using Firestore live listeners

- Implemented secure authentication with email and Google OAuth via Firebase Auth
- Integrated Cloudinary API for photo and video uploads with real-time progress tracking
- Added push notifications using Firebase Cloud Messaging (FCM) for web and mobile
- Designed fully responsive layout for both mobile and desktop using pure CSS
- Stack: React, Vite, Firebase, Cloudinary

Insight Hire — Career Recommendation App

- Built a React Native mobile application that recommends suitable job departments to applicants based on personality assessment
- Implemented Big Five Personality Framework at the backend to compute and analyze user responses
- Developed REST API using Node.js to process personality scores and return department recommendations
- Integrated Firebase for user authentication and storing assessment results
- Designed clean mobile UI with three-option choice system for seamless user experience
- Stack: React Native, Node.js, Firebase

Classification Model Benchmarking — ML Comparative Analysis Project

- Performed data cleaning and exploratory data analysis (EDA) on a raw dataset to prepare it for modeling
- Trained and evaluated three classification algorithms: K-Nearest Neighbors (KNN), Naive Bayes, and Logistic Regression
- Conducted benchmark testing across all models and compared accuracy, with Naive Bayes achieving the highest performance
- Stack: Python, Pandas, Scikit-learn

Mobile Malware Detection Model

- Trained a machine learning model to detect mobile malware using a pre-prepared notebook and dataset
- Achieved 92% accuracy in classifying malware vs. benign applications
- Stack: Python, Scikit-learn, Jupyter/Colab

Gym Management System — Full Stack Web Application

- Built a complete gym management system to handle core operations such as member and record management
- Developed the backend using PHP with SQL for data storage and CRUD operations
- Designed the frontend using HTML and CSS for a clean, functional user interface
- Wrote SQL queries to manage and retrieve member and operational data
- Stack: PHP, HTML, CSS, SQL
-
